Sir:

Request for Correction to the Drawings Under 37 CFR § 1.123

The following changes to the enclosed figures from the above-identified patent application, as highlighted in red and described below, are hereby respectfully requested.

In accordance with 35 U.S.C. § 132 and 37 C.F.R. § 1.118, care has been exercised to avoid introduction of anything which could be construed to be new matter.

REV: 9/9/02

OK  
10/24/02

In Figure 2:

As requested and shown, please delete reference numeral "42" as indicated, while adding cross-hatching to reference numeral "18".

In Figure 3:

As requested and shown, please delete the original Figure 3, and replace with the newly drawn Figure 3, wherein the first electrical conductive contact 46 has been lengthened and the second electrical conductive contact 48 has been shortened, as originally envisioned but inadvertently reversed in drafting. The corresponding lengthening and shortening of 46 and 48, respectively, correctly illustrates the communicative relationship between the contacts, wherein as the switch is manipulated to complete an electrical circuit, the first electrical conductive contact 46 rotates upward and touches against the second electrical conductive contact 48, thereby completing an electrical circuit and allowing electrical current to flow therethrough.

Respectfully submitted,
